SectionTitle: PASSAGE 1: The Phoenicians: An Almost Forgotten People

Section: passage-1

SectionTimeLimit: 20

SectionPassage: The Phoenicians inhabited the region of modern Lebanon and Syria from about 3000 BC. They became the greatest traders of the pre-classical world, and were the first people to establish a large colonial network. Both of these activities were based on seafaring, an ability the Phoenicians developed from the example of their maritime predecessors, the Minoans of Crete.

SectionPassage: An Egyptian narrative of about 1080 BC, the Story of Wen-Amen, provides an insight into the scale of their trading activity. One of the characters is Wereket-El, a Phoenician merchant living at Tanis in Egypt's Nile delta. As many as 50 ships carry out his business, plying back and forth between the Nile and the Phoenician port of Sidon.

SectionPassage: The most prosperous period for Phoenicia was the 10th century BC, when the surrounding region was stable. Hiram, the king of the Phoenician city of Tyre, was an ally and business partner of Solomon, King of Israel. For Solomon's temple in Jerusalem, Hiram provided craftsmen with particular skills that were needed for this major construction project. He also supplied materials – particularly timber, including cedar from the forests of Lebanon. And the two kings went into trade in partnership. They sent out

Phoenician vessels on long expeditions (of up to three years for the return trip) to bring back gold, sandalwood, ivory, monkeys and peacocks from Ophir. This is an unidentified place, probably on the east coast of Africa or the west coast of India.

Section Passage: Phoenicia was famous for its luxury goods. The cedar wood was not only exported as top-quality timber for architecture and shipbuilding. It was also carved by the Phoenicians into expensive furniture. Their most famous export was a purple dye, extracted from murex shells found on the Phoenician coast. This luxury item was in great demand in royal and religious circles throughout the ancient world.

SectionTitle: PASSAGE 2: The Impact of Social Media on Modern Communication

Section: passage-2

SectionTimeLimit: 20

SectionPassage: Social media has fundamentally transformed the way we communicate in the 21st century. Platforms such as Facebook, Twitter, Instagram, and TikTok have created new forms of social interaction that were unimaginable just two decades ago. These platforms have not only changed how we share information but also how we form relationships, conduct business, and even how we perceive ourselves and others.

SectionPassage: One of the most significant impacts of social media is the speed at which information can be disseminated. News that once took hours or days to reach the public can now be shared instantly across the globe. This has democratized information sharing, allowing ordinary citizens to become reporters and commentators. However, this rapid spread of information has also led to the proliferation of misinformation and fake news, creating new challenges for media literacy and critical thinking.

SectionPassage: The rise of social media has also changed the nature of personal relationships. People can now maintain connections with friends and family across great distances, and can easily reconnect with old acquaintances. Social media platforms have become virtual meeting places where communities can form around shared interests, causes, or experiences. However, critics argue that these online relationships may lack the depth and authenticity of face-to-face interactions.

SectionPassage: Furthermore, social media has created new economic opportunities. The rise of influencer marketing has created entirely new career paths, while businesses have

found innovative ways to reach customers through targeted advertising and direct engagement. The gig economy has been facilitated by social media platforms that connect service providers with customers.

SectionTitle: PASSAGE 3: The New Way to Be a Fifth-Grader

Section: passage-3

SectionTimeLimit: 20

SectionPassage: I peer over his shoulder at his laptop screen to see the math problem the fifth-grader is pondering. It's a trigonometry problem. Carpenter, a serious-faced ten-year-old, pauses for a second, fidgets, then clicks on "0 degrees." The computer tells him that he's correct.

SectionPassage: Last November, his teacher, Kami Thordarson, began using Khan Academy in her class. It is an educational website on which students can watch some 2,400 videos. The videos are anything but sophisticated. At seven to 14 minutes long, they consist of a voiceover by the site's founder, Salman Khan, chattily describing a mathematical concept or explaining how to solve a problem, while his hand-scribbled formulas and diagrams appear on-screen.

SectionPassage: But Khan Academy represents a new form of teaching that is beginning to be taken seriously by educators. The process is known as "flipping the classroom." Instead of a teacher presenting a lesson to a class of 20 or 30 students, then assigning homework based on the day's lesson, students watch Khan's videos at home – or, in Thordarson's class, on laptops during school time – and the classroom becomes a place where the homework problems are worked through with the teacher's help.

SectionPassage: Thordarson believes this system lets her focus more closely on students who need help, rather than having to get the material across to everyone at the same time. Students like Carpenter advance through the curriculum at their own pace. On Khan Academy, concepts are broken down into digestible pieces. Students can replay videos they don't understand and receive immediate feedback on their problem-solving.

Points: 1
